LBL, 2011

S. Paschalis et al, NIMA 709 (2013) 44-55

## The “Ultimate” Ge Arrays

- ❖ **EFFICIENCY:** 43%  $M_\gamma = 1$  and 28%  $M_\gamma = 30$  (@ 1 MeV, FULL BALL)
- ❖ **COUNT RATE** capabilities (100s KHz)
- ❖ **ANGULAR RESOLUTION** of the  $\gamma$  interaction point ( $\theta \sim 1^\circ$ )
- ❖ **“PERFECT” DOPPLER CORRECTION** (6 keV @ 1 MeV,  $\beta=50\%$ )

# The Gamma Tracking Array Concept

## HARDWARE

1

Highly segmented  
HPGe detectors

2

Digital electronics  
to record and  
process segment signals  
14 bit, 100 MS/s  
37 signals/crystals  
Raw Data Read Out:  
10 kB/evt/crystal

Identified  
interaction points

$(x, y, z, E, t)_i$

Pulse Shape Analysis  
to decompose  
recorded waves

**Support to the completion of AGATA in full geometry**

AGATA represents the state-of-the-art in gamma-ray spectroscopy and is an essential precision tool underpinning a broad programme of studies in nuclear structure, nuclear astrophysics and nuclear reactions. AGATA will be exploited at all of the large-scale radioactive and stable beam facilities and in the long-term must be fully completed in full 60 detector unit geometry in order to realise the envisaged scientific programme. AGATA will be realised in phases with the goal of completing the first phase with 20 units by 2020.

 $\Phi_n = 5 \times 10^{14} \text{ n cm}^{-2} \text{ s}^{-1}$

Dedicated ballistic neutron guide  
highly collimated beam ( $1 \text{ cm}^2$ )  
cold neutrons (meV)  
 $\Phi_n = 2 \times 10^8 \text{ n cm}^{-2} \text{ s}^{-1}$

# Fission Data

$$^{133}\text{Sb} = ^{132}\text{Sn} + 1 \text{ proton}$$

Lifetime measurements with fast scintillators

	B(M1) [W.u.]
$15/2^+ \rightarrow 13/2^+$	0.24
$13/2^+ \rightarrow 11/2^+$	0.004

Nature of the States is COMPLEX and DIVERSE

Interpretation NOT Doable by SHELL Model:

Too LARGE space

→ Alternative Approach

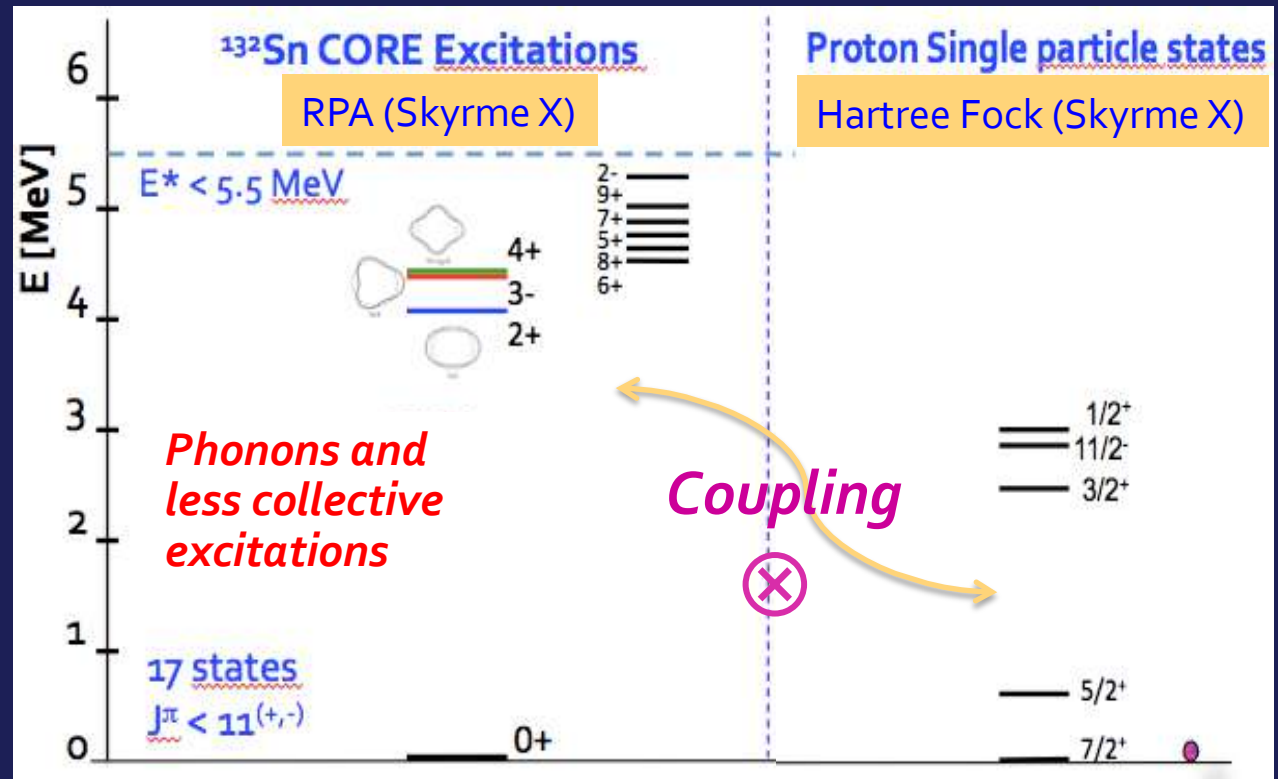

# The New "HYBRID" Model (G. Colò, P.F. Bortignon - Milano)

CORE Excitations (Phonons-RPA) + single particle (Hartree Fock)

## $^{133}\text{Sb}: ^{132}\text{Sn} + 1\pi$

Coupling  
Matrix Elements  
between  
SINGLE PARTICLE  
and  
CORE excitations  
consistently  
calculated

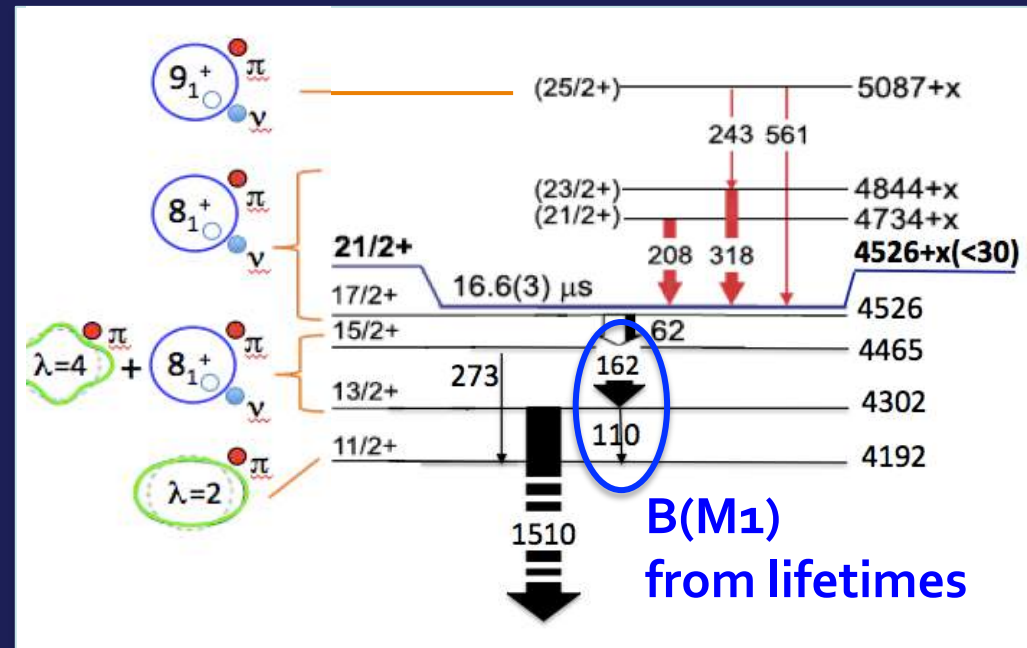

**NO FREE PARAMETERS - Same SkX Interaction**

# The New "HYBRID" Model (G. Colò, P.F. Bortignon - Milano)

CORE Excitations (Phonons-RPA) + single particle (Hartree Fock)

- GOOD *Reproduction of Exp.*
- MIXED States based on *Collective and Non-Collective* Excitations of  $^{132}\text{Sn}$  CORE

**STARTING POINT** for extended investigation  
in **MEDIUM/HEAVY Nuclei** NOT possible with SHELL MODEL !!!

G. Bocchi, S. Leoni, B. Fornal et al., ...Phys. Lett. B 760, 273 (2016)

# OUTLOOK: pinning down the NATURE of the nuclear force

Major problem in Nuclear Physics:  
detail composition of the nuclear force is NOT known !!!

**Bare N-N  
interaction**

can be derived  
from QCD

In HEAVY-Systems:

**Effective N-N  
Interaction**

Corrections are needed  
due to the presence  
of other Nucleons

**LIGHT systems ONLY (up to C, O, Ne, ...)** can be computed by ab-initio calculations:  
→ they are sensitive to details of the N-N interaction (2 body and 3 body terms)

**AGATA exp. in GANIL - in 10 days:**

**$^{18}\text{O}$  (141 MeV) +  $^{238}\text{U}$  (10 mg/cm<sup>2</sup>)**

*$\gamma$ -spectroscopy of n-rich B-C-O-F nuclei*

*High Precision Lifetimes measurements*

$\tau = 100 \text{ fs} - 10\text{'s ps}$

# Conclusions

- **NUCLEAR STRUCTURE PHYSICS** aims at a unified description of **> 7000 Nuclei** in the Universe less than half are known ... very high discovery potential !!!
- **Several BASIC questions to be answered**
  - Microscopic Origin of shapes and deformations
  - Nature of Resonance Excitations – *neutron skins ...*
  - Emergence of complex excitations – *particle-phonon couplings ...*
  - Outlook: sensitivity to details of nuclear force
- **Strong Interdisciplinarity** – Astrophysics
- **State-of-the-Art SETUP**: AGATA, large volume scintillators, ...
- **A Major Challenge for THEORY ...**
